GOOD ROADS AND RAILROADS.

During the past year the building of good roads has continued in the State of New York with gratifying results, says Governor Odell in his message, and the demand for State aid is so great that recourse to bond issues will soon be necessary. In some of the States, he adds, it has been thought wise to have one of the State government departments bring to public attention the natural attractions in the State and give information about them. In New Hampshire this work has been committed to the Bureau of Labor, and the interesting statement is made that over five millions was expended within the State during the past year by non-residents, tourists and summer boarders. Whatever may tend to increase the wealth of a State is important, and the Governor suggests that it might be well to authorize the Forestry Commission to work along similar lines and issue such publications as are necessary to properly and adequately perform this work.

The principle of sharing the cost of any local improvement between adjacent property and all property in the larger division within which the improvement is made, is well established, and is sound, for the benefits are enjoyed at large and the adjacent property could not bear all the burden. Massachusetts—which is distinguished also for the admirable work done on a large scale in the suburbs of Boston by the Metropolitan Commission—has carried on road-making, largely at State cost, on a more thorough system than any other State. Wherever a row of little stakes along each side of the highway is noticed the traveler knows that there will soon be "a State road," constructed in the most substantial and business-like manner. Short sample pieces are also frequently built here and there, usually on the outskirts of a village, and the spot is shrewdly chosen so that a very poor piece of road joins the sample new piece at one end, preferably at both ends; the contrast on emerging from an ordinary poor piece upon this bit of genuine road, and then in plunging off it at the further end, is effective to stir the dullest rural mind, and a demand for better roads soon appears.

Financially, and broadly speaking, the worst disposition of capital is where it does not return interest in any form, and the best is where it does make such return, with every human probability of doing so perpetually; whether the capital goes into the foundations of a bridge, or into a tunnel or an ocean cable, or into a canal or other transportation utility, no matter if the principal is permanently gone, it is not sunk if the interest return is certain. This is, or should be, the test of all investments. The return may be delayed a little, as in some cases it must be; but it must come, and to be continuous. If this condition is fulfilled, and if the future is not too much discounted by over-doing the process, even a resource so easily abused as bond-issuing need not be feared; going into debt is bad and yet a judicious use of credit is often wise; there would be very little commercial progress without borrowing. So it may be that this State will issue bonds for road-making; and it may be, as now proposed in a bill which will hardly make much progress in this short session, that the nation will undertake "a system of national, State and local co-operation in the permanent improvement of public highways." Constitutional authority, it is claimed, is broad and clear, under the "post roads" power. If that be so, it would be a question of expediency, to be taken up guardedly.

The pioneer work of railroads—notably that of the Illinois Central and the Southern Road in sending good-roads trains across country to discourse on the subject and teach the most practical lesson most effectively by making a piece of road and leaving it as a lump of leaven—has already been told on a previous occasion. The railroads are doing much pioneer work by many forms of advertising, in which they show great ingenuity and enterprise; for instance, every road out of Greater New York actively seeks summer-tourist traffic and maintains a publicity bureau. The railroads deserve high praise as business concerns. Yet they might, perhaps, well take road improvement more seriously into consideration than

they are now doing, giving it their powerful support, even if they do not include it in some measure in their scheme of expenditures; for it is essentially pioneer development and directly tributary to railroad traffic. Assuming railroads to be the arteries (according to the familiar figure), the electric roads, which are branching out, even for freight service, as already told in some measure in the CHRONICLE, may represent the larger veins; but the highways or common roads must be the smaller veins, all of them contributory and all necessary to vigorous circulation. The common road has too long been "common" in the bad sense. On the made highways of France and Germany four or five tons of hay are a load easily hauled twenty miles or more; on (or through) sand or mud less than half of such a load may break down. If the railroads carry 1,000 million tons of freight annually, every pound must be hauled over more or less of highway; and perhaps 20 per cent of the total may be classed as farm products. The relation of improved roads to the value of farms and farm products may be left to the imagination; it is somewhat difficult to reduce to definite figures, but the concern of the railroads in it is plainly direct and great.

SPECIALTIES AND SPECIAL TRAINING.

The retiring General Manager of the Pennsylvania Railroad is an engineer, and more than a third of his forty years of service has been passed in the engineering department. The new General Manager is also an engineer, and all of his work up to the present time has been in the mechanical department. Looking over the roster of general officers of this great road, from the President down, and through the list of operating officers on the divisions, one finds that engineers greatly predominate. In the Baltimore & Ohio the same is becoming true; the President and many of the general officers are engineers. Furthermore, as to other railroads, engineers are steadily becoming more numerous in the general offices and the transportation department.

Commenting upon these facts, which it collates, the "Railroad Gazette" editorially remarks that it is not in the least likely that all this has come about as a matter of doctrine or theory; that is, nobody has said, "engineers are fittest for the executive work of railroads, therefore we will go to the roll of engineers to pick out our officers when we need any." Men are picked out and advanced because they can do the work, not because they have had some particular kind of education.

This might be stated in other terms by saying that engineers are not the fittest men for railroad work because they are engineers, but because an engineering training tends to produce the quality of personal fitness. Any layman would say, off-hand, that for the constructive work of railroads an engineer is required, but we think the truth goes further; railway operation is a specialty throughout—a mere "business man," as the term is commonly understood, would not serve the need. Still more, it may be said that the overwhelming demand of the age is for specialists. Mediocrity no longer suffices; the wanted man is he who can do something the world requires to have done and can do it better than others.

The "Gazette" finds another conclusion, hopeful and very useful to young men. The fact it cites ought to encourage the young fellows who find examinations in the engineering schools a hard grind, especially at the holiday season; they may, at times, almost think life hardly worth living; but it will help their courage to reflect that they are preparing to become general and division officers of railroads and great industrial concerns. As to the probable tediousness of waiting, they might also note that the new General Manager of the Pennsylvania is only 37, and that the President of the Baltimore & Ohio is only 44, and was General Manager of the Pennsylvania system at 38. Examination of the railroad lists will show that the average age of the important officers is constantly declining, and the same is true in industrial life; the moral of this is that "the young men should get their claws in good and deep in the first ten years of their active life."

This is a pleasant moral to draw. It is the more pleasant because it is true, and encouraging, and hopeful. Yet we think it may be carried somewhat farther. Quite a number of years ago the disappearance of retailers in a number of lines in our large cities was noted; the great department stores had swallowed them, and so the openings for young men in life were apparently becoming narrowed. The day of combinations has come, and what is left for the young man whose capital is his head and his hands? The outlet and promise are in specialties, and a specialist is only a person who does some valuable thing exceptionally well. The world wants ability, energy and character as never before. For the man who can do things—find new lines and processes, effect economies anywhere, bring forward any marked service, produce any new ends or improve the means to any old ones, and will work with every faculty and unstinted zeal, in the spirit of the motto Edison once suggested for young men, "never look at the clock"—the demand is even eager.

There is a useful object lesson in the career of H. H. Vreeland, who has risen in a few years from brakeman of a gravel train at night on the Long Island Railroad to be head of the surface railroads of this city. He was not only a good brakeman but more than a brakeman. As he said in a recent address, his heart was in his work. "Formerly," he said, "capital was necessary to success, but to-day a young man's capital is his worth to his employers."

PRESSED STEEL CARS.

The first railroad cars were inevitably made of wood, and this was the standard material up to a few years ago, when steel plate began displacing wood on freight cars. The constant problem in all structural work is to secure not only the desired shape but a nice distribution of material according to the strains of use without loading one part with excessive thickness in order to make some other part properly strong. Casting governs shape and distribution very well, but the process has its limitations; building up a structure by riveting plates together attains proper distribution, but in a laborious way and perhaps somewhat faultily; in small structures, such as the joints of bicycle frames, the custom has been to use press-hammered forgings, most of the original material being cut away in course of machining. These parts can be produced of sheet steel pressed into shape without waste of material and with high efficiency and economy; and in general girders are thus made which are uniform in strength, without waste and without rivets, corner pieces being avoided and the necessary function of the usual "stiffeners" here and there being fulfilled by pressing up the material into ridges instead of attaching separate pieces.

The first considerable step in the evolution of the car of pressed steel was in making bolsters of it to be used on wooden cars. The term "bolster" has various meanings, but as relating to cars the bolster is substantially the same as on a common wagon—a cross-piece, parallel to and above the axle, upon which the frame of the car directly rests. When of pressed steel the car bolster is a box girder or hollow rectangular box, put together partly by riveting; it possesses the utmost strength and stiffness, and is interchangeable with the wooden pattern. Then the trucks or framework which, with the wheels and axles, form the running gear, had pressed steel introduced into certain portions, and gradually the truck wholly of this material, in several types, was evolved and became standard. The underframing, which is the part on which the "body" of the car rests, followed in pressed steel; then the entire freight car, wheels excepted, was thus made.

The yellow pine commonly used in car building weighs on the average about 50 lbs. to the cubic foot, and its maximum "fibre strain" when employed as a girder may be taken as 1,500 lbs. to the square inch; steel plate may be taken as weighing 490 lbs. to the cubic foot, with a working stress of 17,000 lbs. to the square inch. Thus the steel is a little less than ten times as heavy as wood but is 11½ times as strong, under loads which are "static" or nearly so; when heavy shocks are experienced the comparison is still more favorable to steel.

Here is a larger percentage of paying load to total load in case of the steel car. Its durability is not yet fully determined by experience. It needs painting about once in three years, which may be cheaply done by machines; repairs, either in straitening bent portions or renewing if necessary, are also made by an ingenious portable heater without removing the car from the tracks. A French road which has some steel cars built as long ago as 1889 reports a loss of only 6 per cent by corrosion, and the life of the steel car is estimated as thirty years, while the wooden one must practically be rebuilt once in fifteen.

On the basis of three mills per ton mile as the cost of hauling, the saving by the 2·1 tons less of dead weight by the steel construction would be $63 per year per car, and the earning capacity of the steel car over the wooden one would be $94 50 annually. The total weight of the wooden cars in use in the United States is estimated at 21 million tons, and if this were reduced one-third by substitution of steel there might be a saving of $147,000,000 in the cost of hauling.

Very striking claims for comparative endurance are also made for the steel car. The average annual mileage of freight cars (wood) was not far from 10,000 miles in 1898 and 1899 on the Pennsylvania system, but 300 pressed-steel cars running in coal service averaged 120 miles per day, or the equivalent of nearly four times the annual mileage of the wooden car, reckoning 325 days in the year. The behavior of wooden cars in collision or overturn is well known, but the steel car seems almost indestructible, if we may judge from cuts, said to be from photographs, showing such things as a car holding a locomotive entirely and two tenders partly, as the result of a head-on collision in which three locomotives met, the car exhibiting no sign of injury.

Whatever be thought of this, or of estimates of saving which are made by friends of the pressed-steel car, the progress of the new type is substantial testimony. The first car of this class was made in 1897. In 1900, 14,464 all-steel and 4,140 with steel underframes only were reported in use; in 1901, of 26,497 cars built 22,288 (84 per cent) were steel. The number now in use must exceed 50,000, and experiments are in progress for making wheels also of pressed-steel. The entire industry is a Pennsylvania one, and the Pennsylvania roads have been the largest customers of it thus far; but of 3,000 cars reported as having been recently ordered by the New Haven road, one-sixth are said to be of steel and one-third to have steel underframes.

There can be no doubt of the substantial correctness of the claims made for the steel car in freight service. The splintering of wood and its inflammability are its characteristics most dangerous to life in case of accident, and the superiority of metal in these respects has long been evident. Now that pressed-steel proves so much lighter and more lasting than wood, and possessing so much greater resisting power under shocks, there is no reason why it should not be applied to passenger cars as well.

STEAM CARS IN MINOR RAILROAD SERVICE.

On short branch or "spur" lines there is a considerable passenger traffic which is perhaps not profitable in itself, yet cannot be abandoned. It does not need an expert to see that the cost of running a passenger train nearly empty is about the same as when fairly well filled, hence that the more a train can be reduced in size for a scant load the better the results. If the passengers can be tucked into a part of the inevitable baggage-car there is a saving; but the locomotive itself seems absurdly wasted in hauling one or two cars. If the light power required could be put into into a car there would be a further saving.

This attractive proposition has been to some extent tried. On the New Haven road an old 60-foot dining-car was taken; an engine or steam truck was substituted for one of the regular ones, and the interior was partitioned off for passengers, having a capacity for 60. The boiler was of course vertical, and was rigidly attached to the truck frame; to provide for turning curves, the car frame (supporting the end of the car) rested on a ring which surrounded the base of the boiler, the boiler itself being thus the centre-pin about which the truck-frame turned; thus there were two rings, one fast to the car and one to the truck-frame, and between these rings 125 1½-inch steel balls were placed, to form an easy bearing. The smallness of available space compelled some modifications in the engine also. Oil fuel was not considered safe, so near the passengers. Water was carried in tanks tucked under the car flooring, but this proved troublesome by the variations in load, and several styles of spring were tried. Speed up to nearly 60 miles an hour was obtained, but the usual average was 45, which certainly seems high for such cases.

This composite car was used in several places. In one it had three 20-mile trips to make in three hours. On Cape Cod it sometimes drew another passenger car, working there on a 7-mile branch; and once it performed the feat of switching 11 freight cars in an emergency. On another branch which had practically no traffic yet the company was obliged to work, it ran steadily for more than a year in lieu of a locomotive and car.

A somewhat similar car was built for the Erie. This was 55 feet long, 33½ of this forming a compartment for 36 passengers, the engine and baggage having the other 17½ feet. The car was heated by direct steam; it had 22 8-candle lamps in the passenger part and a large electric headlight, the current being supplied by a steam turbine and motor. This car ran the 4 miles between Nanuet and New City on the N. J. & N. Y. branch; here it made 14 trips per day for about three months, but was taken off as mechanically unsuitable. The jars transmitted to the passenger part were too great; the car was too heavy on the engine truck, the boiler was of insufficient capacity and the machine was too often out of order. So the car was dismantled and service was resumed with a train.

The Cincinnati Hamilton & Dayton has a branch of 25½ miles and another one of 14 miles, the latter competing with an electric road. A steam car was built for the latter branch in 1898, 33 feet long and carrying only 24 passengers. Fuel was fed to the grate of the vertical boiler from a magazine at the top, and this magazine was carried on the car roof, so that refilling was somewhat troublesome. This car made about six round trips daily for a few months, but many defects were found in it. Boiler and water capacity were considered insufficient; the fire needed cleaning after nearly every round trip, and the grate was hard to get at. Unlike the New Haven car, this one had its boiler fixed to the car framing without any such special joint as described above, and therefore the steam pipes and exhaust pipes had to be provided with flexible joints, as the boiler swiveled with the truck. The engine being near the ground, it could be reached for repairs only at a culvert or pit, and the car was taken out of use.

In another case the car (55 feet long) seated 40 passengers, had a baggage compartment 15 feet long, and 14½ feet for its engine. The rear end of the car was borne on a 4-wheel truck; the engine of course had 4 wheels, and a 2-wheel pony truck ran in front. The engine was a Vauclain 4-cylinder compound, thus being unusually elaborate for a construction of this character. It was intended to run on the 19-mile branch between Xenia and Springfield, Ohio, and to meet the competition of a new electric road; but it did not fulfil the expected conditions, mainly because of trouble with the boiler, and after about a month it was withdrawn, going to the private passenger track of a coal company.

To meet the objection that any failure of the engine withdraws the whole car from service, a car has been devised—and has been considerably used in Europe—which has the engine detachable; the forward end of the car body is hinged and can be lifted up; the disabled steam truck is removed, and another is put in its place, so that the car can be running while repairs are in progress. Gasolene has also been tried, but has not gone beyond experiment. A kinetic motor, so-called—superheated water being stored under high pressure and "flashing" into steam when admitted to the cylinder under a lower pressure—has been tried on a short piece of road near Babylon, Long Island. The steam "dummy" or separate engine was once familiar, and it used to run to Coney Island in former years; but this had objectionable features, which, however, might perhaps be removed by further working out. Quite recently there have been reports from France and Germany of automobile railway cars, presumably gasolene, which are destined to supersede steam locomotives; but these reports are too vague yet to be of any value.

The chief difficulties are the close crowding of the parts and their comparative inaccessibility; the small steam and fuel capacity and the liability to clogging which always beset small boilers, especially vertical ones; also the unequal distribution of weight, the car being heavy at one end and riding roughly. The practical troubles of very small boilers have been more fully shown—on steam motor cars—since these railroad steam cars were built; yet most of the faults of the latter in use are just those which are inherent in such cars and would naturally, one would suppose, have been foreseen.

The data used in this article are about a year old, and the experiments related are several years older; the results were not deemed practically successful, and the subject seems to have been indefinitely laid aside. All the defects mentioned would obviously be avoided by using electricity, which therefore seems intrinsically best for the purpose; perhaps it is better—yet that fact does not of itself throw any valuable light on the very interesting problem which is in course of working-out; whether the electric will displace the steam locomotive. It is a complex problem.

THE ELECTRIC HEADLIGHT.

From the old hand-brake, worked by one man for each two cars, it was quite a step to the spring box-brake which could be set by the engineer, but a far wider step to the air-brake of to-day. By this the engineer grips all the wheels simultaneously as quickly as he once sounded the braking signal by whistle, and by it he holds the train under control. Modern railway service would hardly be practicable without this system, under which the minimum stopping distance of heavy trains has been wonderfully reduced. Meanwhile, the locomotive headlight remains about as it began, a simple oil lamp with a parabolic reflector.

But now comes the application of the familiar electric searchlight to the case. The necessary dynamo is driven by a small turbine with steam from the engine, and the whole requires no additional space of any value. In a recent test on the St. Paul road the poles along the track were clearly defined and the track itself was visible for a mile ahead. A screen for shutting down the light when meeting a train is provided, this screen, as well as the power of the lamp, being controllable from the cab. The direction of the beam is also controllable, as usual with searchlights; and thus the location of trains can be indicated in sections where hills or curves obstruct the view. By actual test this vertically movable beam of light is found to be visible at ten miles' distance, and thus collisions may be made further preventable in a high degree. A system of signals by the use of colored glasses or of interruptions to the beam can easily be arranged.

Another Western device abolishes the outside fixed signals in block systems and substitutes fixed lights within the locomotive cab. These lights are white and red or of other contrasting colors, and as soon as the engine enters a block one or the other of them glows up according as the next block ahead is clear or occupied, also giving warning in case a rail is broken or a switch misplaced. This is accomplished by means of an electric circuit from the outside, and thus these lights become in effect distance signals; they have also the advantage of always being before the engineer's eye and of being safe from possible obscuration by smoke and steam outside. The Chicago & Eastern Illinois road has been trying this system experimentally.

Continued tests have shown that the maintenance cost of the electric headlight is at present just double that of oil, but the difference in efficiency seems to make this increased cost of no practical consequence. The main question about any preventative device must always concern its efficiency. Nothing is so costly as disaster.

RAILROAD COMPANIES.

(For Miscellaneous Companies see pages 150 to 172 inclusive.)

EXPLANATORY.—This Supplement is expressly intended for use in connection with the investment news and official reports published from week to week in the Chronicle. Frequent reference is therefore made to the volume and page of the Chronicle (as, V. 64, p. 000) where fuller information may be found. Following each statement also is given a reference to the latest news item in the Chronicle respecting the company. As every such item contains a reference to the last preceding item, the reader can run back over the company's history at pleasure. Annual reports are in black-faced figures, and *italics* indicate a paragraph headed by the name of some *other* company.

Index.—Any company not in its regular alphabetical order may be found by means of the index to roads leased and consolidated.

Dividends.—The *dividends* tabulated in the text are those actually *paid* during the calendar years named, irrespective of when *earned*.

Net earnings are given after deducting operating expenses and usually taxes, but not interest, rentals or other fixed charges.

Securities.—These are described in table at head of page [except the stock, for lack of space, sometimes only in text below] as follows:

Miles of Road.—Opposite bonds, this means the miles of road owned covered by the mortgage.

Size or Par Value.—Shows (in dollars unless otherwise marked), the denominations or par value, "100, &c.," signifying $100 and larger.

The Chicago Burlington & Quincy sinking funds for the several loans respectively held alive June 30, 1902, of the bonds given above as outstanding: Of g, $5,787,800 January, 1903; h, $1,931,000; k, $409,200.

The *mortgage of 1899 for $85,000,000* secures bonds dated July 1, 1899, maturing July 1, 1949, and to bear interest at not to exceed 5 per cent. Such bonds as may be issued bearing 3½ per cent interest will be subject to call at 105 per cent and accrued interest and those bearing interest at less than 3½ p. c. at par and interest on any coupon day after thirty years. The issue is limited to $85,000,000, and the lien securing the bonds will become an absolute first mortgage, covering all lines east of the Mississippi River, upon the payment of $28,924,000 consolidated mortgage 7 per cent bonds due July 1, 1903, and of $2,320,000 Chicago & Iowa Division 5 per cent bonds due Feb. 1, 1905. Sufficient of the new loan is reserved to take up these $31,244,000 bonds and $37,096,000 were issued in 1899-1902. The remainder is available for additions, etc. See V. 68, p. 771; *abstract*, V. 69, p. 283; V. 69, p. 795; V. 74, p. 1307; V. 75, p. 665.

The *Iowa Division* bonds are a first mortgage on the main line in Iowa from Burlington to East Plattsmouth on the Mo. River, 278 miles, and on 122 miles of branches; they are also a first collateral lien on 420 miles of branches and 86 miles of second track. These bonds have a sinking fund of 1½ per cent ($203,800) yearly, for which the 4s are subject to call at 100, the 5s at 105. The single main line and branches covered "shall not exceed in the aggregate 900 miles," at $16,000 per mile; on second track (of which June 30, 1902, there were 86 miles) may be issued an additional $14,000 per mile. V. 65, p. 462.

Denver Ext. bonds can be increased only for 2nd track at $10,000 p. m

The collateral trust *Nebraska extension* bonds of 1887 are issued at $20,000 per mile for single and $10.000 per mile for second track on not exceeding 1,500 miles. **Abstract** of deed V. 45, p. 441.

Burlington & Missouri RR. in Nebraska consol. mortgage of 1878 is for $14,000,000, and is now a 1st M. or 1st collateral lien; all except the $5,000,000 of *exempt* bonds are subject to call for the sinking fund at par, $278,600 having been retired in 1900. The "exempt" bonds may be called after 1908.

The 5 *per cent debentures* of 1890-92 are *convertible* $ for $ into stock any time prior to Dec. 1, 1902, except when books are closed. $15,614,-800 had been thus converted up to June, 1902. V. 67, p. 842. See terms of conversion on page 5 of the SUPPLEMENT for Oct., 1896.

HISTORY, LEASES, &C.—Reorganized under existing title in 1877. In Nov., 1887, consolidated with two other co's (V. 46, p. 135), and on June 6, 1894, with Chicago & Indiana Coal RR. V. 58, p. 987; also V. 48, p. 334; in 1899 with Evansville Terre Haute & Chicago and Indiana Block Coal RR. V, 71, p. 389. In August, 1902, the St. L. & San Fran. acquired the greater part of the' stock, as said below.

The Chicago & East Ill. owns $1,000,000 stock of Chic. & Western Indiana—having all the local traffic of the latter road from Dolton into Chicago. In 1902 the traffic contract made in 1890 with the Evansville & Terre Haute for the operation of a through line between Chicago and Evansville was still in force. (V. 55, p. 995.)

In July, 1902, the Southern Ill. & Missouri Bridge Co. had let contracts in the interest of the C. & E. Ill. for a bridge across the Mississippi River, at or near Thebes, at an estimated cost of $1,500,-000 or $2,000,000, forming with St. Louis Southwestern a direct line to Texas points. V. 71, p. 1219; V. 74, p. 936.

STOCK.—In addition to the amounts outstanding in the table, $5,-250,600 common and $1,135,000 pref. were held in the treasury in July, 1902.

In Aug., 1902, the St. Louis & San Francisco RR. gave in exchange for the common and preferred stock its stock trust certificates at the rate of $100 thereof for each $100 share. V. 75, p. 289. In Jan., 1903, $6,977,100 of the $7,217,800 common and $4,112,500 of the $6,830,-700 preferred had been exchanged on this basis. The St. Louis & San Fran. has the option to retire the trust certificates at any time at $2 50 per $100 common stock trust certificate and $1 50 per $100 pref. stock trust certificate, payable in gold, and obligates itself to pay off the entire issue in 40 years from date at the same rates meanwhile obligating itself to pay 10 p. c. dividends on the common and 6 per centum on the preferred trust certificates, respectively, these amounts being equivalent to 4 per cent on the principal sum to be eventually received in payment therefor. Upon failure to pay any dividend within 30 days after demand therefor, any holder may surrender the certificates to the trustee and receive the shares represented thereby. See also V. 75, p. 289, 393, 1031.

Wisconsin Minn. & Pacific	¶272	Total operated	956

HISTORY.—The Chicago St. Paul & Kansas City was organized in May, 1886, and in December, 1887, merged with Minnesota & North western. In August, 1892, reorganized per plan, Vol. 55, p. 856.

On Sept. 7, 1893, the Great Western acquired by deed the title of the Chicago St. Paul & Kansas City Ry. (815·67 miles). In June, 1902, the old mortgages were satisfied of record. V. 74, p. 726. As to 7 year contracts made in 1902 with packing companies, see V. 75, p. 341.

SECURITIES.—The holders of *debenture* and *preferred A* stock appoint the finance committee, which exercises general supervision of finances. Additional securities of said issues can be put out, but only with consent of a majority of both said classes of stock present at a meeting. Securities of other issues having a lien prior to preferred A can be created, but only with consent of two-thirds of both classes. The several classes in case of liquidation will have principal paid in gold, according to their priority right to dividends. At extraordinary general meetings of holders of debenture stock and preferred A stock collectively, holders of *one-tenth* of said stocks outstanding, present or represented, constitute a quorum and by a majority vote have power to sanction any modification of the rights of said stocks. The provisions of the several classes of stock were fully set forth in the editorial article of the SUPPLEMENT for October, 1897; see also V. 71, p. 441.

In 1898 the authorized issue of 4 p. c. debenture stock was increased from $15,000,000 to $30,000,000 for future refunding and improvements. See Finances below. V. 66, p. 133, 663, 1088.

In Nov., 1902, $6,500,000 common stock was issued to purchase the outstanding stock of the Mason City & Ft. Dodge *RR.*, Manly Jct. to Ft. Dodge, Ia., and branches, 130 miles; Mason City & Ft. Dodge *Ry.*, Hayfield, Minn., to Manly Jct., Ia.; Oelwein, Ia., to Hampton, Ia., 121 miles, and balance of stock of Wisconsin Minnesota & Pacific RR., 272 miles. V. 75, p. 1201. The stockholders will vote on Feb. 18, 1903, on increasing the common stock from $30,000,000 to $50,000,000 a portion of the new stock to be used to complete the purchase of the above-named roads.—(V. 75, p. 1201, 1253)

DIVIDENDS.—On pref. "A" paid Jan., 1899, 2 p.c.; in July, 1899 2 p. c.; in 1900, 5 p. c.; in 1901, 5 p. c.; 1902, 5 p. c; 1903, Feb., 2½ p. c.

FINANCES.—On March 17, 1902, $3,437,000 additional debenture stock was authorized to be issued, of which $3,073,000 for capital expenditures in 1902; also the sale of two branches from Hayfield, Minn., to Manly Jct., Ia., 49 miles, and from Waverly, Ia., to Hampton, 42 miles, to the Mason City & Fort Dodge RR. for $1,386,000 of the first mortgage 4 per cent gold bonds of the latter; these bonds to be sold and the proceeds used to construct 64 miles of second track between Oelwein and Chicago. V. 74, p. 726; V. 75, p. 559, 665.

Early in 1901 Vermilye & Co. became the fiscal agents of the company, their Mr. Read entering the directory. See V. 72, p. 580.

In Apr., 1901, a syndicate acquired all the stock and bonds of the Mason City & Fort Dodge RR., Mason City to Fort Dodge, Ia., 92 miles, the purchase including coal fields near Ft. Dodge, and arranged to extend the road from Manly Junction to Mason City, 12 miles, and Hampton to Clarion, 30 m. (both completed), to connect with the C. Gt. W., and also to build southwesterly to Omaha, and westerly to Sioux City, a total of about 250 miles. In March, 1902, it was arranged to transfer to the Mason City & Ft. Dodge *Railway* two branches, aggregating 91 miles (see above), which will extend the lines of the Mason City & Ft. D. easterly to the C. G. W. main line.

Wisconsin Minnesota & Pacific RR., Red Wing, Minn., to Mankato, 94 miles, in 1901 purchased Duluth Red Wing & So. and the Winona & Western, making 246 miles then owned, and arranged to build a 27-mile connecting link. Both of the roads are operated for 100 years under agreements dated Apr. 1, 1901, the Chic. Gt. West. to receive their entire net earnings above interest on bonds and own their entire stocks. In December, 1891, the Milwaukee Lake Shore & Western RR. was bought by an exchange of stock. See V. 57, p. 375; V, 56, p. 792.

In 1900 various proprietary roads were purchased and in 1900 to 1902 others built in the interest of the C. & N. W. were absorbed. V. 71, p. 291, 294; V. 73, p. 294, 1010; V. 75, p. 446.

HISTORY.—On Dec. 1, 1895, succeeded to the property of the old New York Lake Erie & Western RR. Company, sold in foreclosure on Nov. 6 under its second consolidated mortgage. The new company holds in fee or through ownership of all or practically all the stock of the independent companies, the line from New York to Chicago (including the Nypano RR. and Chicago & Erie companies) and also all branch and subsidiary lines except a few small properties. The reorganization **plan** of 1895 was in V. 61, p. 368.

In January, 1898, control of the N. Y. Susquehanna & Western was obtained. The road is operated as an independent line.—V. 66, p. 83, 335, 573, and editorial p. 53. See STOCK below.

In Jan., 1901, entire stock of Pennsylvania Coal Co. was acquired, the purchase including valuable coal mines. Erie & Wyoming Valley RR., Scranton, Pa., to Lackawaxen, 59 miles, and the Hawley branch, 15·61 miles, formerly leased to the Erie. See BONDS below. V. 71, p. 1219, 1311; V. 72, p. 44, 136, 241, 532, 627; V. 73, p. 398. In 1901 an interest in the stock of the Lehigh V. RR. was purchased. V. 73, p. 391.

COAL AND STEAMBOAT PROPERTY.—The *Erie* coal properties represent an aggregate of 10,500 acres of anthracite, of which about 9,000 acres are held in fee; also 53,000 acres of bituminous coal lands held in fee 14,000 acres of bituminous held under mineral rights. Its coal tonnage in the year 1901-02 aggregated 12,411,078, out of the 27,697,159 tons hauled. The Union Steamboat Line (merged in Erie RR. Co June 30, 1896), has terminal, etc., properties in Buffalo and 8 lake steamers. See V. 63, p. 514. The *Penn.* coal properties acquired in 1901 are additional. See above.

STOCK.—The *stock* is to be held by J. Pierpont Morgan, Louis Fitzgerald and Charles Tennant, Bart., voting trustees, for five years, and thereafter until the new first preferred stock shall have received 4 per cent cash dividend in one year. The new company reserves the right to redeem either class of its preferred stock at par in cash. Provisions of voting trust and preferred stock certificate were given in SUPPLEMENT of April, 1897, page 3.

In Mar., 1898, Erie 1st pref. stock was increased from $30,000,000 to $43,000,000, and common stock from $100,000000 to $113,000,000, to acquire New York Susq. & Western stock.—See V. 66, p. 335, 573. The 1st pref. stock was further increased in 1901 $5,000,000 in connection with the purchase of the Pennsylvania Coal Co. V. 72, p. 136.

DIVIDENDS.—First semi-annual dividend on 1st pref., 1½ p. c. was paid Aug. 30, 1901; in 1902, 3 p. c. (F. & A.); in 1903, Feb., 1½ p. c.

BONDS.—The new first consolidated mortgage is for $175,000,000 [Farmers' Loan & Trust Co. trustee]—see **abstract** of deed V. 62, p. 89, and secures $35,000,000 prior lien and $140,000,000 general lien bonds. Of the $140,000,000 *general lien bonds*, $92,073,000 are reserved for the ultimate acquisition of bonds and guaranteed stocks left undisturbed on various parts of the system [see list V. 62, p. 89], and $17,000,000 were reserved for new construction, betterments, additions, etc., after 1897, under carefully guarded restrictions, not over $1,000,000 to be used in any one year.

The position of the first consolidated mortgage is substantially as follows: It is a first lien [mortgage or collateral, the prior lien bonds, however, preceding the general lien bonds] upon the company's chief coal properties (except Penn. Coal Co.) upon its water transportation lines, including valuable terminal properties appurtenant thereto, and upon a number of profitable local lines in New Jersey and near Buffalo; it is a *second lien* upon certain minor coal properties and upon the railroads leading to all the coal properties, upon the terminals at Jersey City, upon the Buffalo New York & Erie Railroad (the main line to Buffalo) and the Buffalo terminal properties other than those upon which it is first lien, and upon the entire line from Salamanca to Chicago; it is a *second consolidated mortgage* upon the lines between Piermont and Dunkirk (447 miles.)

The collateral trust 4s of 1901 are secured by 51 per cent of the entire New York Susquehanna & Western stock ($26 000,000 total issue), all of the Pennsylvania Coal Co stock, and the stock of the Erie & Wyoming Valley RR., Scranton, Pa., to Lackawaxen, 65 miles, and the Delaware Valley & Kingston RR. Of the bonds $32,000,000 were issued to acquire these stocks (excepting the N. Y., Susq. & Western, already owned), the remaining $4,000,000 being reserved for improvements to the properties represented by the stocks acquired. A sinking fund of 10 cents per ton of coal sold purchases bonds at not exceeding 105, otherwise to be applied to the drawing of bonds by lot, all such bonds to be kept alive and the accruing interest thereon to be added to the sinking fund, which, it was estimated, will be sufficient to retire the whole issue at or before maturity. V. 71, p. 1219, 1311; V. 72, p. 44, and circular, p. 136, 532 257. In 1901-2 $222,000 of the amount shown above as outstanding was purchased by the sinking fund.

Real estate mortgages outstanding June, 30, 1902, $763,325.

Old Bonds—Under the first consol. mortgage of 1895 the company covenants to pay the interest regularly on all the old bonds in the table that are marked with a * or a ‡ (except N. J. & N. Y. bonds,) and to take them up and pledge them with the trustee at maturity.

Long Dock 6s see March, 1894, SUPPLEMENT under N. Y. L. E. & W. For *N. Y. Lake Erie & W. Coal & RR.*, see SUP. January, 1895.

FIXED CHARGES.—The fixed charges of the System were reduced by the reorganization from $9,400,000 to $7,860,000 per annum.

FINANCES.—In 1901-02 $2,931,000 general lien bonds were issued for construction, etc. V. 71, p. 754, 1219. The first dividend on first preferred was declared in July, 1901. See above and V. 73, p. 137.

The purchase of the control of the Pennsylvania Coal Co. in 1901 removed the danger of an independent anthracite coal line to tidewater. The acquisition was financed by the issue of $32,000,000 collateral trust 4 per cent gold bonds and $5,000,000 first pref. stock. V. 71, p. 1219, 1311; V. 72, p. 44, 136, 532.

ORGANIZATION.—A consolidation, in Aug., 1882.

In Nov., 1902, the company was proposing to extend its line about 2,500 to 3,000 miles to the Pacific Coast, under the name of the Grand Trunk Pacific Ry., the Pacific terminus to be Port Simpson, 350 miles north of Vancouver. Negotiations, it was reported, were pending for the purchase of the Canadian Northern Ry. as a part of the extension. V. 75, p. 1202, 1301.

In Dec., 1902, purchase of the Detroit & Toledo Shore Line RR., Trenton, Mich., to Toledo, O., about 39 miles, was arranged, in connection with the Toledo St. Louis & Western Ry., on the basis of a guaranty by both companies of the principal and interest of $2,000,000 Shore Line bonds. The road is to be extended from Trenton to Delray (5 miles from Detroit), 15 miles, so as to afford connection with the Toledo St. Louis & Western to St. Louis. V. 75, p. 1354.

STOCK, ETC.—The authorized capital on June 30, 1902, was £41,656,364 stock (£40,813,834 issued and £842,530 unissued), advances from the Canadian Government in aid of construction amount to £3,111,500. Perpetual consolidated 4 per cent debenture stock; authorized by Act of 1882 and later Acts, has been issued from time to time to acquire securities of companies consolidated and controlled, amounting June 30, 1902, to £7,690,018, and bearing an annual interest of $399,397. V. 71, p. 84. The £522,200 Northern Ry. 5 per cent bonds due July 1, 1902, were retired at maturity; additional consolidated debenture stock was issued therefor.

Illinois Central RR.—(CONCLUDED).

On Dec. 1, 1899, took over portion of St. Louis Peoria & Northern Ry. from Springfield to East St. Louis Ill., 98 miles. V. 71, p. 547. The Fort Dodge & Omaha RR. extension, Tara Station, near Fort Dodge, Ia., to Council Bluffs, Ia., 130 miles, was purchased by the Dubuque & Sioux City RR. on June 16, 1900, and leased for 50 years to the Ill. Central for its net earnings above interest on Ill. Cent. bonds issued thereon (see below). V. 71, p. 547. During 1900-1 various branches of Yazoo & Miss. The Chicago St. L. & N. O. is leased for 400 years from July 1, 1882, at 4 per cent per annum on its $10,000,000 stock deposited to secure the *leased line stock*.

CAPITAL STOCK.—The *leased line stock* is secured by deposit of $10,000,000 Chicago St. Louis & New Orleans stock, and in case of default for sixty days on any semi-annual dividend of 2 per cent, the stockholder is entitled to his share of the stock pledged. (V. 65, p.1071.)

Early in 1901 the stock was increased from $60,000,000 to $66,000,000, in Nov., 1901, to $79,200,000, and in Aug., 1902, was further increased to $95,040,000, to provide additional equipment and facilities. Missouri Pacific Ry.—(*See Map.*)—Operates an important system extending westerly and southwesterly from St. Louis, Mo., including main lines from St. Louis to Omaha, Neb., 495 miles, and from Kansas City to Denver, Col., 758 miles, with many branches in Kansas, etc. Through the St. Louis Iron Mt. & Southern, which it controls, connection is had with Texas and the lines of the Texas & Pacific, International & Great Northern and the St. Louis Southwestern, the whole forming what is known as the "Gould System," in which the heirs of Jay Gould are largely interested (see list of Mr. Jay Gould's holdings, V. 60, p. 83.) The Mo. Pac. property includes:

Extension from Boonville to Jefferson City, 47 miles, and Lake City to Rock City, 9 miles, completed Apr., 1902, forming part of line to Kansas City. V. 75, p. 549. Oronogo County to Granby completed July, 1902.

Early in 1901 a large interest was acquired in the Denver & Rio Grande RR. and so in the Rio Grande Western Ry., extending the system as far west as Ogden, Utah. The Gould and Rockefeller holdings in the Denver & Rio Grande are together understood to constitute a large majority of the entire capital stock.

In 1901 the Little Rock & Hot Springs Western RR., Little Rock to Hot Springs, Ark., 57 miles, was acquired and late in 1902 the St. Louis Valley Ry., East St. Louis to Chester, Ill., 65 miles. V. 74, p. 574; V. 75, p. 611. As to St. Louis Iron Mt. & Southern acquisitions, see statement for that company following. Proposed extension, by Memphis Helena & Louisiana Ry., see V. 73, p. 1160; V. 74, p. 1038.

ORGANIZATION, LEASES, &C.—The Pacific RR. of Missouri was sold in foreclosure September 6, 1876. The present company was a consolidation in August, 1880, embracing the Missouri Pacific and minor roads. The bonds of the proprietary lines are practically all pledged to secure Mo. Pacific loans. The Iron Mountain stock is mostly owned by the Missouri Pacific. Control of the International & Great Northern was secured in 1892 and of Central Br. U. P. in 1898-99.—See V. 68, p. 329, 520. As to Texas & Pac., see below.

STOCK.—In July, 1901, the authorized capital stock was increased from $70,000,000 to $100,000,000. The amount outstanding on Dec. 31, 1900, was $50,432,150; this was increased to $76,402,875 in 1901 by the conversion of $11,218,000 collateral trust bonds and by issue of $2,983,500 for purchase of entire stock, and $2,983,500 "B" bonds of K. C. Northwestern, and by further issue of $14,422,000 [partly at par to stockholders] to purchase $14,800,000 common and $7,300,000 preferred stock of Denver & Rio Grande and for other purposes; in 1902 $1,400,000 was sold to pay for new construction, 56 miles. V. 72, p. 1188, 1238, 1280; V. 73, p. 185, 1356; V. 75, p. 549.

New York Central & Hudson River RR.—*(See Map.)*—

HISTORY, &c.—Control of the Lake Shore and Michigan Central roads was acquired in 1898, as stated below. Their earnings are reported separately, but the dividends on their shares held by the Central are included in the item "other income," offset by a like amount of interest on the collateral bonds issued for their purchase. V. 71, p. 502.

In Jan., 1900, control of the Lake Erie & Western was acquired, also a large interest in the Cleve. Cin. Chic. & St. Louis, increasing the Vanderbilt interest in the latter to an absolute majority. The Central has since transferred its holdings in these companies to the Lake Shore, which see. In 1900, also, an understanding was reached between the Vanderbilt and the Pennsylvania interests, by which the latter became jointly interested in Ches. & Ohio Ry.—V. 70, p. 76, 125, 1049. Holdings of Vanderbilt estate, V. 71, p. 1221.

The Boston & Albany RR., 394 miles, giving a through line to Boston, was taken over under lease Nov. 10, 1900, its operations being included in earnings of system from July 1, 1900. See that company.

BONDS.—Description of debentures was on page 3 of SUPPLEMENT of April, 1895. They are all secured by the refunding mortgage of 1897 equally with the 3½s. *Ref. mortgage* is for $100,000,000, of which $70,377,333 reserved to retire all existing bonds at or before maturity and $14,622,667 for premiums; the remainder ($15,000,000) is reserved for new construction after 1903. In 1903 3½s of 1897 had been issued to retire about $56,000,000 of old bonds.

Collateral trust 3½s of 1898 are secured respectively by deposit in trust with the Guaranty Trust Co., mortgage trustee, of stock of the Lake Shore & Michigan Southern and Michigan Central RRs. at the rate of $100 of L. S. & M. S. stock for each $200 of bonds and $100 of Mich. Cent. stock for each $115 of bonds outstanding. The total authorized issues of 3½s are $100,000,000 for Lake Shore and $21,550,000 for Michigan Central. The loans are secured by separate deeds of trust. See V. 66, p. 288, 336, 760, 811.

The N. Y. Cent. issued in 1900 $5,500,000 of 100-year 3½ per cent debentures for certain property not included in the Boston & Albany lease. See V. 69, p. 1102; V. 71, p. 502, 964.

GUARANTIES.—The company guarantees the securities of its leased lines to a considerable aggregate—see separate statement for each company marked with a ¶ in the table of mileage preceding. It also guarantees Western Transit Co. 4½s for $1,000,000 due February, 1903.

GENERAL FINANCES.—The refunding of the $70,377,000 of old high-interest-bearing bonds into the 3½s of 1897 during the years 1898 to 1905 will effect a very large annual saving in interest charges; to Jan., 1903, about $56,000,000 old bonds had thus been retired; annual saving in interest charges by refunding to Jan., 1903, about $1,325,000. V. 75, p. 1148; V. 76, p. 159.

In July, 1901, the company had acquired $45,289,200 of the capital stock of the Lake Shore road in exchange for 3½ p.c. bonds (see above), leaving $4,177,300 afloat, including $533,500 guaranteed 10 per cent dividends (see V. 66, p. 288, 336, 1238), and also $16,814,300 of Mich. Central stock, leaving $1,883,600 still outstanding.

In April, 1900, $15,000,000 stock was issued at par to provide new rolling stock, and on Apr. 16, 1902, the stockholders voted to increase the stock from $115,000,000 to $150,000,000, $16,912,900 of the new stock being subscribed for by stockholders pro rata at $125 per share. V. 74, p. 151. A portion of the proceeds will be used for the substitution of electricity for steam on New York suburban division and New York terminal improvements, estimated to cost $20,000,000. (V. 74, p. 151, 776; V. 75, p. 240, 290, 550, 1203, 1254; V. 76, p. 48.)

In 1902 control or virtual control of the Reading Co. was acquired by the Baltimore & Ohio (Pennsylvania interests), who later agreed to share the same with the Vanderbilt interests, the purchase by the latter being made through the Lake Shore & Michigan Southern. V. 76, p. 101.

Average train load for entire system, including company's freight, was 387 tons in 1901-02, against 392 tons in 1900-01.

EARNINGS.—For 6 mos. ending Dec. 31 (partly estimated):

6 mos.	*Gross.*	*Net.*	*Other inc.*	*Charges.*	*Bal., sur.*

Dividends of 2½ per cent called for $3,297,900 in 1902, against $2,875,000 in 1901.

ANNUAL REPORT.—Fiscal year ends June 30. Report for 1901-02 was given at length in V. 75, p. 727, 737. See also editorial p. 704. Of the freight (35,599,689 tons) carried in 1901-02, about 33 p. c. was coal and coke.

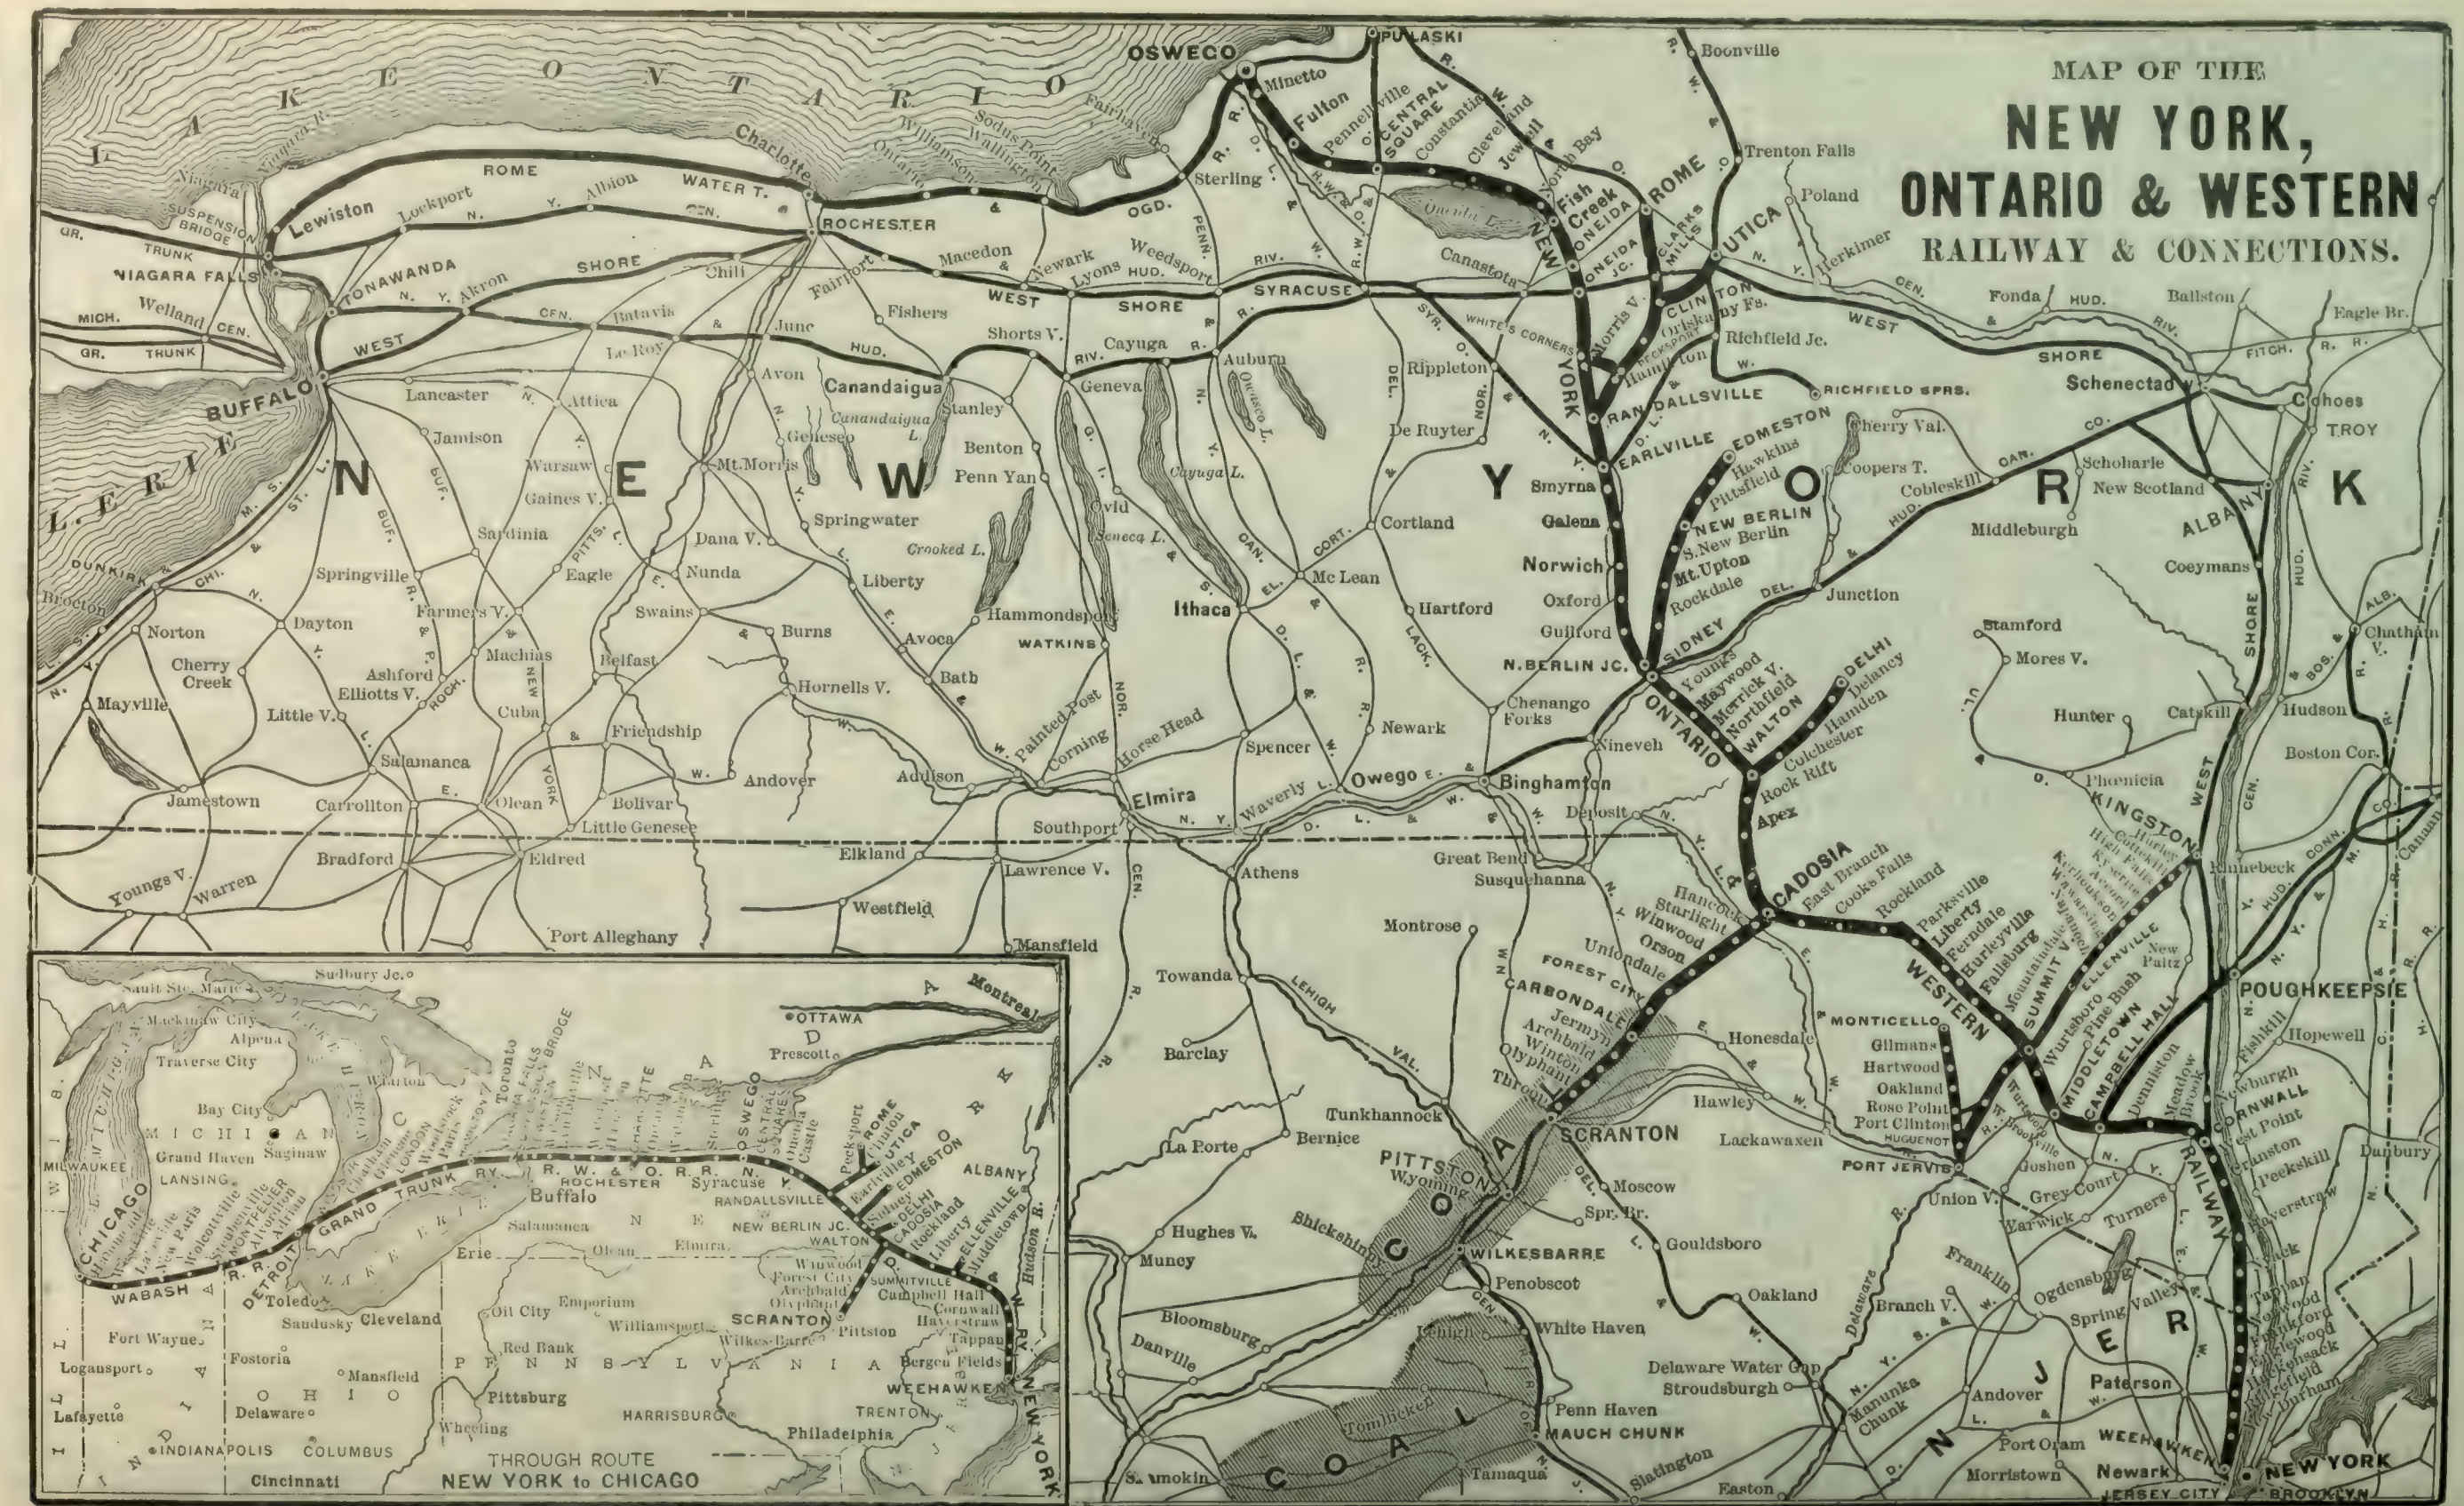
On Dec. 2, 1902, the Port Jervis Monticello & New York RR. was foreclosed and was succeeded by the Port Jervis Monticello & Summitville RR. The new organization is controlled by the New York Ontario & Western Ry. and its line, in connection with the Ellenville branch and the Ellenville & Kingston RR., forms a through line, put in operation Dec. 22, 1902, from Port Jervis to Kingston. V. 75, p. 1400.

ORGANIZATION.—The New York & Oswego Midland was sold in foreclosure Nov. 14, 1879, and this company organized.



STOCK.—Stock is $58,118,982, (par, $100), of which $5,000 is old pref.

VOTING TRUST.—The preferred was originally $2,000,000, but all except $5,000 has been exchanged for bonds under act of June 8, 1885. The exchanged preferred stock is held alive under a voting trust and elects eight of the thirteen directors under a provision of the "Articles of Association," until a dividend shall have been earned and paid upon the common stock. The voting trustees elect directors in the interest of the common stock. See V. 61, p. 425, 426, and editorial, V. 65, p. 495.

BONDS, ETC.—*Refunding mortgage* for $20,000,000 covers 319 miles of road owned, all the securities of the Ontario Carb. & Scranton Ry., 54 miles, and all other property hereafter acquired. The balance unissued is available for additions, improvements, etc. V. 72, p. 87.

GENERAL FINANCES.—In 1902 surplus earnings were being applied to double-tracking 107 miles of main line, to extend over three or four years, to cost about $1,500,000. V. 74, p. 830; V. 75, p. 505.

Early in the calendar year 1899 the coal properties at Scranton, Pa., of the Lack. Iron & Steel Co., (the capacity of the collieries then open being about 700,000 tons per annum) were purchased by the Scranton Coal Co., aided by loans from the N. Y. O. & W., the latter issuing its $2,500,000 5 p. c. notes (reduced to $2,150,000 on Aug. 1, 1902), extending over a period of years secured by first mortgage on the coal property, and loaning $1,475,000 (of which $295,000 has been repaid) secured by a second mortgage thereon, the O. & W. obtaining a contract for the entire tonnage. V. 68, p. 41, 429. The coal companies are expected ultimately to take] care of all the obligations created. V. 69, p. 604, 646.

Bonds.—The first consolidated mortgage of 1896 is limited to $62,500,000, of which an amount equal to the underlying bonds can be issued only on the retirement of the same. On June 30, 1902, the balance unissued ($29,285,500) was reserved as follows: To retire $19,889,000 outstanding prior lien bonds, $22,098,889; for new construction, acquisitions and improvements, not exceeding $1,000,000 yearly, $3,690,611; and $3,500,000 additional for similar purposes. The right to issue prior lien bonds has been annulled. V. 73, p. 502; V. 74, p. 151; V. 75, p, 505.

The *4 per cent first consols* are a first mortgage on a large part of the system, viz., about 846 miles of railroad; upon important terminals at Norfolk and Lamberts Point; upon the Ohio River Bridge and the Roanoke Machine Works; besides being a consolidated mortgage upon the remainder of the system, subject to the undisturbed liens. They are further secured by the equipment, certified to have cost over $11,000,000, covered by the car trusts and equipment bonds taken up under the plan. See abstract in V. 64, p. 376. V. 72, p. 137, 438, 532, 723, 1080; V. 75, p. 505.

The N. & W.-Pocahontas joint bonds are secured by about 295,000 acres of coal lands owned and held by the Pocahontas Coal & Coke Co., whose stock is owned, of which about 50,000 acres have been leased to companies whose stock is all owned by the United States Steel Corporation and 39,797 to other concerns, the royalties under such leases alone being shortly expected to be sufficient to almost meet the fixed charges. They are subject to call at 105, beginning 1906, for a sinking fund of 2½ cents per ton mined. V. 73, p. 845, 902; V. 74, p. 41, 380, 1197; V. 75, p 502. These bonds are the joint and several obligations of the Railway Company and of the Coal & Coke Co.

The equipment trusts of 1902 ($3,500,000) were issued on new equipment costing $5,000,000. V. 74, p. 681; V. 75, p. 502.

For description of funded debt, see V. 75, p. 504.

General Finances.—The reorganization reduced the fixed charges from $3,214,037 to $2,218,450, a reduction of $995,587, making the annual charges ahead of the new common stock smaller than those ahead of the old preferred stock. Of the traffic in 1901-1902 58 per cent (7,056,721 tons) was bituminous coal and coke.

As to Pocahontas bonds of 1901, see above. Dividends on the common stock were begun in June, 1901. V. 72, p. 873.

Earnings—For 5 months ending Nov. 30:

Organization.—Incorporated Nov. 1, 1899, as a consolidation of Chicago & West Michigan Ry., Detroit Grand Rapids & Western RR. and Flint & Pere Marquette RR., per plan in V. 68, p. 1024, 1181. The Lake Erie & Detroit River Ry., 226 miles miles, including leased line, 24 miles, was taken over Jan. 20, 1903.

In Dec., 1902, a syndicate consisting of Thos. H. West and John F. Shepley of the St. Louis Union Trust Co., F. H. Prince, G. H. Norman, Newman Erb Nathaniel Thayer, T. F. Ryan, Mark T. Cox, B. P. Cheney, T. Jefferson Coolidge, and others, acquired $9,271,700 of the $14,145,500 common stock, which, together with $2,800,000 additional stock (about equally divided between common and preferred stock) have been placed in a 5-year voting trust, thus ensuring control. The purchase of the Lake Erie & Detroit River Ry. and an agreement for trackage with the Michigan Central, terminable on 60 days' notice, from St. Thomas to Buffalo, 140 miles, extends the line easterly from Detroit to Buffalo. The road, it was understood, will continue to be operated independently. V. 75, p. 981, 1203, 1254, 1302.

Stock.—Authorized $16,000,000 common and $12,000,000 4 p. c. non-cum. pref.; outstanding common $14,145,500, preferred as in table.

Dividend.—On pref., 4 p. c., paid Feb. 11, 1901; Aug. 1901, 2 p. c in 1902, Feb., 2 p. c., Aug. 2 p. c.

Bonds—The consol. 4s of 1901 (total issue $50,000,000) are limited to $20,000 per mile of completed single track line, including underlying bonds, or $25,000 per mile double-track. Of the bonds, $26,656,000 were reserved to retire the same amount of old bonds. V. 72, p. 675. Of the Marquette Equipment bonds one-tenth will be retired yearly by the sinking fund at par, and the entire issue may be called at that price on 60 days' notice. V. 72, p. 1184.

The collateral trust gold bonds of 1902 (limited to $2,870,000) are secured by the entire capital stock ($1,400,000) of the Lake Erie & Detroit River Ry., the National Trust Co., Limited, of Toronto, being trustee, and are subject to call on any interest day on 60 days' notice. They bear interest at 3 per cent to Dec. 1, 1905, and thereafter 4 per cent to maturity. V. 75, p. 1302; V. 76, p. 213.

Central RR. of New Jersey (op. independently. See that co.) 677

(¶ See this company.) From the company's docks at the extensive terminal at Port Richmond it operates a line of steamers and barges in coastwise coal traffic and provides berths with elevators and ample accommodations for several trans-Atlantic steamship lines. In Jan., 1901, control of the Central RR. of New Jersey was acquired. V. 72, p. 86, 340, 392, 676; V. 73, p. 847.

STOCK OWNERSHIP.—The Baltimore & Ohio and the Lake Shore & Michigan Southern are jointly in virtual control, having acquired in 1902-03 over $60,000,000 of the $140,000,000 stock, consisting largely of preferred stock. V. 76, p. 102.

VOTING TRUST, ETC.—All classes of stock of the new company are to be held by voting trustees (J. Pierpont Morgan, Frederic P. Olcott and C. S. W. Packard) for five years, and thereafter until 4 p. c. cash dividend per annum shall be paid on the first preferred stock for two consecutive years, though the trustees may in their discretion surrender the stock at an earlier date. The company may, after dividends of 4% have been paid on the first preferred for two consecutive years, convert the second preferred stock into one-half first preferred and one-half common stock. As to rights, see V. 64, p. 709. **Voting trust**, V. 64, p. 955, and SUP. of April, 1897, page 5.

ORGANIZATION.—The Philadelphia & Reading RR. (chartered April 4, 1833) and the P. & R. Coal & Iron Co. were sold in foreclosure Sept. 23,'96, and reorganized per plan in V. 61, p. 1109. See V. 64, p. 709.

In the reorganization the 41 millions of old stock and the 56¾ millions of old preference income bonds were assessed 20 per cent, the stock then receiving 100 per cent in new common and the preference incomes, common and preferred stock in certain proportions.

The "Reading Company" in the reorganization acquired the security holdings, real estate, equipment, etc., of the old Phila. & Reading RR. Co.; also the $20,000,000 stock and $20,000,000 bonds of the Phila. & Reading *Ry.* and the $8,000,000 stock of the Coal & Iron Co., and against all this property issues its own securities. See V. 64, p. 709.

The property of the "Reading Company" consists of the following:

SINKING FUND.—Whenever, in any year, a dividend is paid on the stock, an amount must be paid simultaneously to the trustee equal to 5 cents per ton on all coal mined by the Coal & Iron Company during the preceding year, if the aggregate of dividends so declared exceeds that sum; otherwise such lesser sum as shall equal the dividends so declared. Under this provision $383,525 was set aside in Mar., 1900, and $433,000 general mortgage 4s canceled, and in 1901 $366,371 was paid and $391,000 bonds canceled; in Mar., 1902, $443,935 was set aside and $443,000 bonds canceled. V. 73, p. 848.

DIVIDENDS.—On 1st preferred, 1900: 3 p. c.; 1901, 4 p. c.; in 1902, Mar., 2 p. c.; Oct., 1 p. c. V. 75, p. 442.

BONDS.—The *General Mortgage* 4s (abstract V. 64, p. 612) are secured by mortgage and pledge of all properties and securities embraced in the reorganization, and also all other property acquired thereafter by use of the new bonds. They have above sinking fund out of the revenues from the Coal & Iron Company, but are not subject to compulsory redemption prior to maturity. The new mortgage is also, subject only to the bonds for which reservation is made, based upon properties or securities of all the lines of railroad owned, including the Philadelphia & Reading Railway Company proper, 365 miles; various leasehold lines, 635 miles; all the property of the Coal & Iron Company, or the securities thereof, representing nearly 200,000 acres of coal and timber land; equipment valued at about $18,000,000, also marine equip. See application to list in V. 64, p. 709.

Furthermore, it has a first lien upon a majority of the capital stock of various companies in the system owning 453 miles of railroad, and also on various bonds of system—list in V. 64, p. 613. Of the $135,000,000 fours of 1897 $51,457,500 were reserved to take up undisturbed bonds and $15,500,000 for future construction, equipment, etc., at not over $1,500,000 per annum.

V. 64, p. 470; V. 65, p. 516. The *consol* 5s of 1882 for $5,673,042 were also extended at 4 p. c. till Mar. 1, 1937, the Reading Co. and Coal & Iron Co. becoming responsible. The *coal trust certificates* under agreement of May, 1895, are not redeemable until April, 1904—see V. 63, p. 838 and Jan., 1895, SUPP.

The *Philadelphia Subway Loan* is payable after ten years from date in 20 annual instalments, to secure which $500,000, bearing interest, has been deposited, and $100,000 yearly is being set aside in monthly instalments. See V. 58, p. 1110; V. 62, p. 950; V. 63, p. 881; V. 71, p. 758.

They are subject to call on April 1, 1906, or any interest day thereafter, at 105 and interest, on 60 days' notice. See **abstract** of mortgage. V. 72, p. 487; V. 73, p. 847.

They are additionally secured by $833,000 of the general mortgage 4s, which may be withdrawn as the car trusts are paid off. V. 72, p. 822.

Under plan for readjustment of Central Pacific securities, the Southern Pacific in 1899 acquired the entire capital stock of the Central Pacific. See that company; also see below. Large amounts in improvements were expended during 1901-2. V. 73, p. 33; V. 75, p. 1407.

In Jan., 1900, So. Pacific interests acquired control of the Galveston Houston & Nor., Houston to Galveston, 53 m. In Feb., 1900, substantially all the stock and bonds of the Carson & Colorado were acquired and the road will be broad-gauged and eventually extended as a link in a new line made from Los Angeles, in Southern California, easterly towards Salt Lake, Utah. The Ogden & Lucin RR. will be built during 1902-04 from Ogden to Lucin, 107 miles, as a cut-off, saving 46 miles. V. 74, p. 380, 1197; V 71, p. 85. In Nov., 1900, a majority of Pacific Mail SS stock ($10,005,000) was acquired. V. 71, p. 1013, 1312.

PROPRIETARY LINES.—These, with a total mortgage indebtedness June 30, 1902, of $305,976,670, are mostly owned—only $11,156,900 out of their total stock of $303,924,572 not being held on July 1, 1902, by the Southern Pacific Co. "OMNIBUS LEASE," see SUP'T of Jan., 1899.

STOCK, ETC.—Total stock authorized, $200,000,000, including $67,275,500 exchanged in 1899 for Central Pacific stock—see Central Pacific and V. 68, p. 378, 725; V. 69, p. 132; V. 70, p. 740.

BONDS.—The 4 per cent collateral trust gold bonds of 1899 are limited to $36,819,000, and are subject to call at par on six months' notice. The first issue of $28,818,500, secured by the $67,274,200 common and $12,000,000 preferred stock of the Central Pacific, was issuable forthwith. The remaining $8,000,000 can be issued from time to time only as an equal amount of Central Pacific preferred is received and added to the collateral, $5,000,000 of this stock being reserved for improvements and additions on the Cent. Pac. at not exceeding $200,000 yearly—see Cent. Pac. and V. 68, p. 378. See Mortgage Abstract, V. 69, p. 859.

The two-five-years collateral trust 4½s of 1900, limited to $30,000,000 (present issue, $15,000,000), are secured by deposit of $7,174,000 par value of various bonds and $59,487,000 stocks of companies controlled, including Pacific Mail etc., and $1,530,000 Wells, Fargo & Co stock; other $15,000,000 is issuable against the deposit of additional stocks and bonds of companies controlled or acquired up to 90 per cent of the actual cost thereof. See Mortgage Abstract, V. 71, p. 1314.

The first refunding 4s and 30-year gold 3½s issued by the Central Pacific are unconditionally guaranteed, principal and interest.

In Jan., 1903, a plan for the issuance of long-term low-rate refunding bonds was in abeyance. V. 74, p. 269; V. 75, p. 395.

Southern Pacific RR.—*(See Maps.)*—ROAD.—Owns all the California lines of the Southern Pacific system except the Central Pacific and the South Pacific Coast. The road owned aggregates about 3,260 miles, embracing a through line from east bank of Rio Grande River through New Mexico and Arizona, via Los Angeles, San Francisco and Oakland, to Tehama in No. California, with numerous branches. Of the lines owned and leased in 1902 (7 miles are leased), 3,018 were operated in the Southern Pacific system, 242 miles (Mojave to The Needles) being held under long lease by Atchison in exchange for leases of 350 miles of roads in New Mexico and Arizona. V. 65, p. 931, and Atch. T. & S. F. item, p. 1113; see V. 64, p. 609. The construction of 55 miles from Ellwood, Col., to Surf opened in Mar., 1901, furnishes coast line from Los Angeles to San Francisco. V. 68, p. 617; V. 72, p. 582

ORGANIZATION.—Incorporated on March 7, 1902, as a consolidation of the So. Pac. RR. companies of Cal., Ariz. and New Mexico. V. 74, p. 578. The Southern Pac. RR. of Cal. was leased to Southern Pac. Co. for fixed charges, betterments and additions and a certain percentage of the surplus income under the "omnibus lease."

STOCK.—So. Pac. *Company* June 30, 1902, held $100,640,133 of the stock.

BONDS.—*Consolidated Mortgage* of Sept., 1893, (see full abstract V. 57, p. 1041), provides for all prior liens and new construction. Bonds may be issued not exceeding $30,000 per mile, of which $7,500 a mile is reserved for additions and betterments. See V. 57, p. 469. This mortgage in January, 1899, covered 1,982 miles, of which it is an absolute 1st lien on 724 miles. The supplemental mortgage issued in 1898 limits this loan to $30,000,000, (exclusive of bonds to be issued against underlying securities). Most of the consols are stamped subject to call at 107½ after 1905 as shown in table above. V. 67, p. 1111.

LAND GRANT.—The land grant was 12,840 acres per mile, and proceeds of sales go to retire bonds, but a large proportion of the lands barren and useless for agricultural purposes without irrigation. In 1901-2 sales were 171,360 acres for $699,395 and 20,862 acres were surrendered; interest on deferred payments, $21,144; land notes outstanding June 30, 1902, $2,036,250. Lands unsold June 30, 1902, 4,866,396 acres, including 453,280 in litigation. V. 75, p. 1407. See So. Pac. item V. 65, p. 778.

REORGANIZATION PLAN.—The plan now operative (V. 75, p. 736) issued by the two committees in July, 1902, was given in V. 75, p. 188. It provides for the formation of a new company, which will be authorized to issue $17,000,000 common and $14,000,000 preferred stock. The preferred stock will have preference as to assets in case of liquidation and will be limited to dividends of 5 per cent per annum (cumulative after 2 years); it will be convertible at any time, at the option of the holder, into common stock, on the basis of $150 common for $100 preferred, but will be subject to redemption at any time after 3 years at 110 on 90 days' notice. Practically the entire issue of the preferred and $10,000,000 of the common will be issuable at once, the remainder ($7,000,000) of the common being reserved toward conversion of the preferred. Of the immediate issue of common stock $4,-5,000,000 will be purchased at 50 by a syndicate furnishing $2,250,-000 for working capital and payment of certain debts. Of the $29,-432,254 Asphalt of America 5s, $2,500,000 will be surrendered for $1,500,000 of the new common stock.

RAILS AND THEIR WEAR.

One of the practical difficulties encountered by the first locomotives constructed in England, crude and small as they were, was that they were quite too heavy for "the cast-iron plates" then in use, which had been made for a much less trying service. When the plans for the Stockton & Darlington road were under consideration in 1824, George Stephenson advised the projectors not to use a single cast-iron rail, although he had a patent on one and its adoption would have been directly profitable to him; he urged the laying of malleable rails instead. The malleable rail was "fish-bellied," 2 inches deep where it rested on the chair and 3¼ in the middle part; the rails weighed 28 lbs. to the yard, and cost about £12 per ton, against £5 10s. for the cast rails; so, as-initial expense was quite as vital a matter in railroad building then as it has ever been since, the required 1,600 tons were divided equally between the two kinds.

The railroads of the middle of the century also had trouble with their rails, which had assumed the T-section and were of rolled instead of cast iron. At one time there were occasional derailments by what was called "creeping," *i. e.* displacement because proper arrangement to take care of expansion under the sun's heat had not been made when laying the rails. The rails wore rapidly; they crushed down flat, especially at the joints, where each end was all unsupported laterally; and they split and splintered at the edges. Improvements and cheapening in steel-making led to the steel rail, without which the remarkable progressive reduction in freight rates would have been impossible.

Such a train as was in use forty years ago would be out of proportion on the road and track of to-day; it would resemble using a broad axe to snip off a thread. But if such a train as is regularly used now had been in existence forty years ago, and if any company had dared run it on roads as they were then, it would speedily have pounded the structure to pieces; it would have been as impracticable for use in 1860 as a Taunton locomotive of 1860 would have been on the Liverpool & Manchester road in 1830. The road structure (including the rail) and the train which runs on it are related to each other much as the passenger elevator and the tall office building are; each is a cause or a condition of the other. Without the elevator the tall building would be commercially impossible; without the building the elevator would not have been developed; and without the skeleton form of construction there could be no tall buildings—the thick walls would consume the ground area. So the railroad of to-day would be useless without the modern locomotive and train, and the locomotive and train would be impossible without the modern road. The office building is practically a steel bridge standing on end, with cars plying through it; and all this ramifying and multiplying development—including the railroad, which is so much changed as to be almost a new construction—has come from the new era of steel production.

But the steel rail itself has its trials and its limit, and the foregoing remarks are suggested by some outline cuts in the "Railroad Gazette," showing graphically some remarkable wear on certain rails in a very trying spot. The spot is the Horseshoe curve in the Alleghanies, and the rail is the standard one of the Pennsylvania road. On every curve there is a tendency in the train to keep to the straight line, this tendency being proportioned to the sharpness of the curve and especially to the speed of the train and weight of the train; the rails are obliged to steer (so to speak) the train away from the natural straight line, just as a ship's rudder steers the ship, which also moves ordinarily in a straight line, the influence of winds and currents excepted. For this reason the track is made to incline to the inner side of the curve, and the traveler who cares to take notice can always tell the

direction of the curve by observing which side of the car rises. Necessarily, the outer or high rail bears the brunt of this "steering" service; the wheels press against the inner side of the outer rail on the curve in their effort to obey inertia and continue in the straight line; so the inside of the outer rail gets a greater wear.

The two rails illustrated were laid in 1895, and were removed after 28 months' service. The inner or low rail lost 16 lbs. (16 per cent) of weight, which was almost all on top of the tread; the outer or high one lost 20·3 per cent, but this was even more on the inner side than on top of the tread. As the wheels pressed close up against the side (being held by the flange from sliding off) the flange cut directly into the side of the rail; and as the flange was not quite as wide as the rail, a little "bead" or flat strip remained below where the flange had cut its way in.

This subject has the most immediate concern for professional railroad men, yet it has an incidental interest for everybody, for it illustrates the fact that railroad operation is a very practical and a very complicated business. Because we are accustomed to see trains operated with almost unvarying frequency and precision, we come to expect and demand this, and are disposed to be impatient even if they fail to come in on time; so it may be well to be reminded how full railroading is packed with difficulties—mechanical, executive and financial. It is an intricate piece of machinery, which requires the highest order of ability throughout.

DRAWBRIDGES AND LIFT BRIDGES.

When a bridge is to be carried over navigable water having a traffic so heavy that it cannot be interrupted, as in the familiar case of the East River here, the structure must be elevated sufficiently to clear vessels and can then be permanent; but the grade on the approaches is so intolerable in practice, and the navigation is so seldom continuous, or nearly so, that the compromise of a movable portion or "draw" is used. The usual practice is to have a section of the structure pivoted and swinging horizontally; when closed it joins the other portions, and when opened it is parallel with the channel. Of course it is so placed as to uncover the best portion of the channel, but the pier on which it is borne is an unavoidable obstruction. If the deeper part of the channel is narrow the pier is the more obstructive; if it is wide, the pier is an obstacle in the centre, which is the best portion, for one full width of channel is much better than two narrow ones. This is the main defect of the common draw, and the desideratum is to get the entire length of the bridge removable, so that the water shall be as clear as if no bridge had been placed there.

The only method of accomplishing this is to revert to the type of the original drawbridge of medieval or perhaps earlier times, which was a trapdoor construction, hinged, to be let down for use and drawn up for disuse. In essence, the pattern is like the double doors of a hatchway, which come down to close the opening or turn up to the vertical. The removable bridge of this pattern is in two parts, hinged at the shores, which meet in the centre as they close and then form a continuous roadway without pier or any support; but there is improvement in the "hinge" and other details. Of course the structure is thick and heavy at the shore ends, being made on the "bascule" plan, a counterweight working up and down within a pit and balancing the structure. The first bridges of this kind were hung on huge pivots or trunnions, and some still are; but the power required to move so heavy a weight is considerable, and the most improved design substitutes large rollers in such a way as to lessen the frictional resistance.

As remarked above, the main advantage of the "lift" over the "draw" bridge is that it leaves the entire width of the stream always open and unobstructed; the narrower the stream the greater this advantage, and the open space may be even 1,000 feet wide. A peculiarity also is that when the bridge is "up" it is itself a visible signal as far as the unbroken view extends, and it also becomes a gate across the approach. It is thus impossible for a car or a train to "run off the draw," although it can be run against the bridge itself. The claim of safety on this score needs a little qualification, however, for if the halves are raised to nearly the vertical (as they must be in order to clear the full width of the stream), they become "bumping-posts" which would stop a train too summarily; yet when raised only a little they may evidently act as safety stops. An instance of this actually occurred, a year ago, when a motorman disregarded the signal and ran along as one of these bridges over the Chicago River was rising. The forward car ran nearly off the half-bridge but not quite, being checked by the incline which the rising structure had assumed; the only damage was the crushing of the platform hoods and the derailing of the forward car; but if the draw had been of the revolving type the train would have gone into the river.

Another feature is that a wide bridge of this type is only several narrow ones placed side by side, and so the width may be increased subsequently as desired. It is also claimed that this type is more economical of space on the shore, and can be built and operated at a lower cost, as well as being more rapid and easy in working. These are substantial claims, and the type has come into enough use during the past ten years to show that it is a distinct improvement for railroad service.

FREIGHT TELPHERAGE.

We have all become familiar with electricity in many varied phases of service, including the transportation of passengers, and undoubtedly freight carrying by it is destined to increase. Some account of an interesting system of small electric factory railroads which is coming into use has been given in a former Supplement, but there is another freight-handling system that follows along the processes of merchandise production, and is also related to railroad work because it is a potential auxiliary in freight handling.

This goes by the general name of telpherage, an idiomatic word made up from the Greek in the same manner as "telegraph" and "telephone." The reader may have noticed a single elevated rail, supported by brackets, extending over a steamship pier; this may be worked by hand, yet it is even then a form of telpher, being an adaptation of the barn door hung from a rail on which it runs. Telpherage is an electric railroad which adapts itself to circumstances. In the majority of cases it is a small elevated road which goes level or on a grade, in straight lines or around "S" curves, as may be convenient. It is hung from the outside of buildings by brack-

eted supports; or it has a more elaborate overhead structure, "A" shaped or otherwise; it crosses ravines or even rivers; it uses small cars, buckets, or anything which suits the particular carrying; it picks up, carries and deposits; it loads and dumps; it carries its operator with it, or it works automatically without one from either or both ends of the run; sometimes its rail is purposely set on a grade and it raises a loaded bucket from one point, the bucket and contents running by gravity to the dumping place, where the load is automatically dumped, the empty bucket then being drawn back up the incline by a counter weight, and then the process is repeated indefinitely.

This is a sort of trolley line, of course using an electric motor. It may be underground, and is then called a tubular dispatch; or it may run on the surface. It is generally elevated, sometimes as high as 100 feet from the ground, but usually just enough to conveniently clear everything. It carries coal and ashes, or multiform materials and products in their several stages between the buildings of a factory. Its essential idea is to bring the carrying apparatus to the load, instead of bringing the load to the carrying apparatus; it is a truck which hunts out the load where it is, picks it up and takes it to the desired point. It would be impossible, except at considerable length and by the aid of cuts, to indicate the detailed services of which this system is capable; having found the particular need, it adapts itself to that, using the almost exhaustless flexibility of electricity. The actual operating cost is also claimed to be low, since the power consumed is very moderate and nearly every factory or dock now-a-days has a power plant of its own, so that independent installation for telpherage is seldom required.

There is a saying that goods well bought are already half sold, but this is quite as true of goods which are well made, i. e., economically made. The competitive struggle over the civilized world is how to reduce cost of production without sacrifice of quality. The factor of transportation and handling is an important part of production cost, and this factor runs along from the getting of the material itself out of the common storehouse, the earth, through all processes until the consumer is reached. The costs of handling—i. e., carting, picking up and moving—are a considerable percentage of the total cost of merchandise, in many cases. Whatever lowers these costs favors freight and is of interest to railroads; but telpherage goes farther and offers direct service to railroads in handling baggage and miscellaneous freight at docks and freight yards. For instance, the telpher receives a load at the car door, raises it enough to clear obstacles, and carries it to the freight house. It can pick freight directly out of the centre of a close car, although not yet able to take it from the ends; but when cars are constructed (as perhaps they may be some time hereafter) so as to uncover at the top for their entire length, the telpher will be able to load and unload from the entire length.

What this carrier which undertakes to pick up anything and carry it anywhere offers to do for railroads is to take freight from the cars on the tracks to the warehouses or freight sheds; or to transfer it to wagons or trucks for local distribution; or to take it to other tracks where it is to be loaded into cars for smaller cities. Undoubtedly the waiting time of the freight cars of this country, due to delays in loading and unloading and shifting freight, is equivalent to keeping a considerable percentage of the total number of cars permanently idle. What this amounts to is a matter of estimate on which there can be no exact agreement, yet it must be considerable, and it represents waste and obstruction. There has been rather an unusually notable congestion of freight during the past year, which proceeds not more from the labor of hauling the cars on their actual runs than from the expenditure of time in handling the freight and getting the cars at liberty to be hauled. Of course this consumption of time in freight-handling can never be entirely eliminated, but any system which gives fair promise of lessening it is worth consideration by railroad interests.

GRAVITY UNLOADING.

The common modes of unloading freight cars are three: shoveling out by hand labor; dumping, as with the contents of gravel or coal cars, the car body tipping up after the fashion of a road cart or a handbarrow; and dropping out through the bottom, after the manner of a trapdoor. A common form of car body is the hopper, for material which is in bulk, like coal; but this has the serious objection that its converging sides also converge the load and cause it to jam instead of to flow. The great problem is to devise means for attaining an automatic discharge by gravity, and to make this discharge certain, rapid and controllable.

The Goodwin car attains this by a device of great ingenuity and simplicity—one of the things which, after they are done, seem so obvious that everybody must think of them at the first contemplation of the problem. The construction cannot be fully described in detail without cuts, but the car might be called a modified and greatly improved hopper. The cross-section of the car body—omitting the inclined or vertical parts which raise the load-compartment a little higher, acting thus like the "sides" of a handbarrow—is in the general form of a capital "X." The load is carried in the upper half of this X, and, so far, it converges as in the common hopper; but the lower parts of the upper halves of the X are capable of opening on the point of intersection as on a hinge, either singly or simultaneously. Thus the load is set free to move downward by gravity, and either of the lower halves of the X becomes an inclined slide along which the freed load passes. The lower halves of the X are similarly hinged and controllable, separately or together; not only this, but the entire upper halves are hinged again at their upper ends to the cross-frame of the top, so that one or both may be opened out wide. The result of these movements is that the load may be discharged downwards on the track just within either rail or equally inside both, or it may be shot out to either or both sides so as to clear the track entirely and fall down an embankment or into any convenient receptacle.

The load moves itself without being touched; this is true not only of materials of comparatively easy flow, like coal, gravel and ore, but of red-hot cinders, pig iron and quite large rock, except that no material larger than broken stone ballast should be discharged between the rails, lest it should jam. The car valves may be connected and worked simultaneously by air pressure, so that a whole train may be discharged by a single movement, or they can be worked separately by hand; the load may be discharged simultaneously in several direc-

tions, and also while the cars are running at the usual speed of freight trains. The car is of the pressed-steel construction, having the advantages of that type in lightness and strength.

There is a large economy by such cars in the space and construction cost required for trestles, chutes, docks and the like. Trains save the time ordinarily consumed in unloading car by car; a coal train can back upon a dock and, without uncoupling or shifting, can drop its entire load into barges, and pull out, a train of forty cars being capable of discharging 1,600 tons and pulling out, all within five minutes' time. At some wharves along the Great Lakes a masterful method, characteristically American in its boldness, has been employed for discharging coal. Six different machines, working successively, each in its own way, lift the car up and tip the load out of it as flour is turned out of a scoop. The operation of one of the boldest of these dumpers is thus described:

"A train of coal is run into a siding having a slight gradient. The first car is uncoupled and moves slowly down to a point over a 'puller,' which hauls it up to the proper point. By the simple movement of a lever both the car and 'pan' (a part of the machine) are now caused to tilt over, one towards the other, the coal sliding out into the pan. At the proper moment the pan begins its backward movement, permitting the car to be turned *completely bottom side up*, to the end that every vestige of coal may be removed. In its dumping *the track follows up the car*, the latter, as it is being tilted, coming in contact with heavy chains which hold it firmly to the track. Both car and pan are now returned to their first position, and the operation of loading the vessel is begun.

"The loaded pan, by the movement of another lever, is sent to the top of the tower, the jaws of the chute finding their position below the bottom. A gate in the pan is now opened, and the coal slides out and down through the chute. While the pan is emptying the dumped car has been pushed out of the way by a loaded one which takes its place, ready to be tilted into the pan when it comes down."

According to the railway journal which furnishes the description, this operation reduces the cost of loading vessels with coal by some 90 per cent. If that is a correct estimate of the economy of an operation which, daring as it is, seems to resemble, in comparative clumsiness, driving a spigot by ramming the barrel against it, the cost of handling by the Goodwin dropping device ought to come near to zero.

However that may be, this car is surely an interesting and suggestive example of improvements in hauling and handling which—and not statute laws—have brought down freight charges.

NUT-LOCKING DEVICES.

A screw thread is an inclined plane carried spirally round a cylinder. The grade or slope of this plane determines the fineness or "pitch" of the thread, which is usually designated by the number of threads or turns per longitudinal inch on the cylinder. In use, one thread runs into, or upon, another, giving either the common wood screw or the machine screw, the latter generally made as a bolt-and-nut.

The advantages of a screw over a nail are its ease of removal, its firmer hold in its place, and its power to compress together the two portions of material through which it passes. But there is always some difficulty in keeping this compression grip firm, for the nut always has a tendency to slip back a little. This tendency is greatest where there is vibration, as in machinery of all sorts, and it is also most hurtful there, for whenever moving or jarring parts become a little loose they tend to "pound" and batter each other; there are also many places, as in electric railway construction, where firm contact of parts is indispensable.

The "finer" the thread the less steep its slope, and hence the less tendency in the nut to back loose—i. e., to slide down hill. But the thread must be shallow or deep according as it is fine or coarse, and it could not be made otherwise; the finer the thread the less its strength, and so there is necessarily a close proportion between the diameter of the bolt and the "pitch" of the thread. This method of making nuts hold their grip is therefore impracticable, but there are many devices for the purpose. One of the oldest is the lock-nut, which is a second nut run on to jam the first; often a D-washer is placed between the two, the idea being to press the first nut forward without turning it, the "lock" always depending upon setting up friction between the threads of the nut and bolt, so that they may mutually grasp each other.

We cannot attempt to even mention all these devices, some of which are hard to describe without a drawing, but may refer to a few. In one, a circle of wire like the common split key-ring follows the nut and lies up against it, gripping the thread by its own elasticity. Another device splits the nut itself, the intent being to make it press and bind on the thread by the act of driving it up home to its place. Another, which is intended especially for use in track work, consists of a square washer with two opposite edges turned over. These edges rest on the fishplate, and the whole washer has a springiness which keeps the little jars from loosening the nut; the hole in the washer is also cross-cut on its edges, so that the corners of the square nut are expected to be gripped as well by their elasticity. Another device, for use where nuts are tightened against wood, consists of a washer-plate which has on one edge spurs that are pressed into the wood and on the opposite edge two spurs that are turned up against the side of the nut after it is screwed into position. A very ingenious device is the Columbia lock-nut, made in two parts. The inner nut is threaded, also slotted through on one side, and its outside is tapered; the outer nut is tapered to fit the inner one, but is not threaded. Both being either hexagonal or square, when the outer nut is turned it carries with it the inner and threaded one; but as the outer nut projects forward at the start, it comes up against the seat first. Further turning forces the inner nut into the outer, when the action of the two coned surfaces on each other squeezes the split inner nut together and jams it hard down on the bolt. The greater the strain exerted to drive the outer nut the harder the inner one is forced into grip on the bolt. This device of a double nut has visibly the merit of neatness and simplicity, and seems to be in principle one of the most correct and effective yet produced

Also owns one-sixth interest in the Richmond-Washington Co. and one-half interest in Atlanta (Ga.) Belt Line Co., 5½ miles. Leases, jointly with the Louisville & Nashville RR., the Georgia RR., which operates and controls 626 miles. The acquisition in 1902 of a majority interest in the Louisville & Nashville brought 4,916 miles of additional road under the control of the Atlantic Coast Line.

ORGANIZATION—.Originally the Atlantic Coast Line of Va. (change of name being authorized in Jan., 1900); in April, 1900, absorbed by consolidation (per plan V. 70, p. 840, 893) the following allied properties: Wilmington & Weldon RR., South Eastern RR., Atlantic Coast Line railroads of South Carolina and Virginia Norfolk & Carolina RR. The Atlantic Coast Line Co. (of Conn.) owns a majority of the stock. See that company above. V. 70, p. 893; V. 71, p. 1116, 1310.

The Savannah Flor. & Western Ry., which owned and controlled 2,234 miles, was merged, possession being taken July 1, 1902, this including the Florida Southern and Sanford & St. Petersburg, whose entire stocks are owned. These lines formed the old Plant system. V. 74, p. 774, 829.

In Oct., 1902, it was arranged to acquire $30,600,000 of the $60,000,000 Louisville & Nashville RR. stock, the Atlantic Coast Line RR. to give in payment $10,000,000 cash, $35,000,000 in 4 per cent 50-year collateral trust bonds and $5,000,000 stock. V. 75, p. 733, 792, 905.

STOCK.—Atlantic Coast Line RR. of Va., class A, tax-exempt stock was assumed as so much of the common stock of the new company. Under the consolidation with the S. F. & W. in 1902 the common stock was increased from $15,890,200 to $23,150,000. (See above.)

In Nov., 1902, the authorized common stock was increased by $15,000,000; of the new stock $5,000,000 was given in part payment of controlling interest in the Louisville & Nashville stock, $8,500,000 additional being subscribed for as part of the same transaction at $125 per share, $31 2 › being payable Dec. 20, 1902, and the remaining $93 75 being payable on or before Feb. 15, 1903. This raises the amount outstanding to $36,650,000. V. 75, p. 1252.

The preferred stock ($18,850,000) has, as shown in the above table, been mostly exchanged for 125 per cent in 4 per cent certificates of indebtedness. V. 75, p. 1252.

DIVIDENDS.—Dividends on pref., 2½ per cent paid Nov. 15, 1900; 1901, 5 per cent (paid M.-N.); 1902, 5 per cent. The *railroad* mortgage securing the 3 per cents of 1899 will refund bonds marked "¶" in table maturing during next four years and also provide fund for improvements and extensions. Bonds in excess of $40,000,000 may be issued thereunder on vote of two-thirds of the stockholders for extensions of not over 500 miles, main track, at not exceeding $20,000 per mile, to fund leased line rental obligations and for future betterments not to exceed $5,000,000 at not over $1,000,000 per annum from Jan. 1, 1900. Stockholders in 1899-00 purchased $31,988,000 of the new 3 p. c. bonds at the rate of $650 cash for each $1,000 face value; V. 70, p. 739. See official circular in V. 69, p. 178; also p. 26, 129, 541; V. 70, p. 429, 995.

In Dec., 1902, made a joint equipment trust for $475,000 with Mobile & Ohio RR. covering 500 freight cars. V. 76, p. 47.

GENERAL FINANCES.—The new management has made large expenditures for the development of the property, having purchased 4,000 new freight cars and 77 heavy locomotives, and undertaken important work in the reconstruction of bridges, etc. V. 70, p. 686, 894, 944, 995.

The money to pay all the existing 6 and 7 per cent bonds having been deposited with the United States Trust Co., together with the interest thereon to the maturity of the several loans, the annual interest charge of the C & A. RR. Co. is virtually 3 per cent on the $31,988,000 new bonds, viz., $959,640. V. 71, p. 1012.

This stock is nearly all owned by the Railway company, which therefore treats the dividends received thereon ($1,525,622) as "other income," as here shown.

The Chicago Burlington & Quincy sinking funds for the several loans respectively held alive June 30, 1902, of the bonds given above as outstanding: Of g, $5,787,800 January, 1903; h, $1,931,000; k, $409,200

The *mortgage of 1899 for $85,000,000* secures bonds dated July 1, 1899, maturing July 1, 1949, and to bear interest at not to exceed 5 per cent. Such bonds as may be issued bearing 3½ per cent interest will be subject to call at 105 per cent and accrued interest and those bearing interest at less than 3½ p. c. at par and interest on any coupon day after thirty years. The issue is limited to $85,000,000, and the lien securing the bonds will become an absolute first mortgage, covering all lines east of the Mississippi River, upon the payment of $28,924,000 consolidated mortgage 7 per cent bonds due July 1, 1903, and of $2,320,000 Chicago & Iowa Division 5 per cent bonds due Feb. 1, 1905. Sufficient of the new loan is reserved to take up these $31,244,000 bonds and $37,096,000 were issued in 1899-1902. The remainder is available for additions, etc. See V. 68, p. 771; *abstract*, V. 69, p. 283; V. 69. p. 795; V. 74, p. 1307; V. 75, p. 665.

The *Iowa Division* bonds are a first mortgage on the main line in Iowa from Burlington to East Plattsmouth on the Mo. River, 278 miles, and on 122 miles of branches; they are also a first collateral lien on 420 miles of branches and 86 miles of second track. These bonds have a sinking fund of 1½ per cent ($203,800) yearly, for which the 4s are subject to call at 100, the 5s at 105. The single main line and branches covered "shall not exceed in the aggregate 900 miles," at $16,000 per mile; on second track (of which June 30, 1902, there were 86 miles) may be issued an additional $14,000 per mile. V. 65, p. 462.

Denver Ext. bonds can be increased only for 2nd track at $10,000 p. m

The collateral trust *Nebraska extension* bonds of 1887 are issued at $20,000 per mile for single and $10.000 per mile for second track on not exceeding 1,500 miles. **Abstract** of deed V. 45, p. 441.

Burlington & Missouri RR. in Nebraska consol. mortgage of 1878 is for $14,000,000, and is now a 1st M. or 1st collateral lien; all except the $5,000,000 of *exempt* bonds are subject to call for the sinking fund at par, $278,600 having been retired in 1900. The "exempt" bonds may be called after 1908.

The 5 *per cent debentures* of 1890-92 are *convertible* $ for $ into stock any time prior to Dec. 1, 1902, except when books are closed. $15,614,800 had been thus converted up to June, 1902. V. 67, p. 842. See terms of conversion on page 5 of the SUPPLEMENT for Oct., 1896.

HISTORY, LEASES, &C.—Reorganized under existing title in 1877. In Nov., 1887, consolidated with two other co's (V. 46, p. 135), and on June 6, 1894, with Chicago & Indiana Coal RR. V. 58, p. 987; also V. 48, p. 334; in 1899 with Evansville Terre Haute & Chicago and Indiana Block Coal RR. V, 71, p. 389. In August, 1902, the St. L. & San Fran. acquired the greater part of the stock, as said below.

The Chicago & East Ill. owns $1,000,000 stock of Chic. & Western Indiana—having all the local traffic of the latter road from Dolton into Chicago. In 1902 the traffic contract made in 1890 with the Evansville & Terre Haute for the operation of a through line between Chicago and Evansville was still in force. (V. 55, p. 995.)

In July, 1902, the Southern Ill. & Missouri Bridge Co. had let contracts in the interest of the C. & E. Ill. for a bridge across the Mississippi River, at or near Thebes, at an estimated cost of $1,500,000 or $2,000,000, forming with St. Louis Southwestern a direct line to Texas points. V. 71, p. 1219; V. 74, p. 936.

STOCK.—In addition to the amounts outstanding in the table, $5,250,600 common and $1,135,000 pref. were held in the treasury in July, 1902.

In Aug., 1902, the St. Louis & San Francisco RR. gave in exchange for the common and preferred stock its stock trust certificates at the rate of $100 thereof for each $100 share. V. 75, p. 289. In Jan., 1903, $7,070,000 of the $7,217,800 common and $4,143,500 of the $6,830,700 preferred had been exchanged on this basis. The St. Louis & San Fran. has the option to retire the trust certificates at any time at $2 50 per $100 common stock trust certificate and $1 50 per $100 pref. stock trust certificate, payable in gold, and obligates itself to pay off the entire issue in 40 years from date at the same rates meanwhile obligating itself to pay 10 p. c. dividends on the common and 6 per centum on the preferred trust certificates, respectively, these amounts being equivalent to 4 per cent on the principal sum to be eventually received in payment therefor. Upon failure to pay any dividend within 30 days after demand therefor, any holder may surrender the certificates to the trustee and receive the shares represented thereby. See also V. 75, p. 289, 393, 1031.
